Sequence 38, Application US/0929225

Patent No. 6455666

GENERAL INFORMATION:
APPLICANT: McCall, Catherine A.
APPLICANT: McCall, Catherine A.
APPLICANT: McCall, Catherine A.
APPLICANT: Mcber, Eric R.
TITLE OF INVENTION: NOVEL DERMATOPHACOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: MOUSE THEREOF
FILE REFERENCE: AL-2-C3
CURRENT FILING DATE: 1999-04-15
EARLIER APPLICATION NUMBER: 60/098,909
EARLIER PILING DATE: 1998-05-13
EARLIER RILING DATE: 1998-05-13
EARLIER RILING DATE: 1998-04-17
EARLIER RILING DATE: 1998-04-17
EARLIER RILING DATE: 1998-04-17
EARLIER PILING DATE: 1998-04-17
SOFTWARE: PAPLICATION NUMBER: 60/085,295
EARLIER PLING DATE: 1998-04-17
SOFTWARE: PAPLICATION NUMBER: 60/085,295

; Sequence 2, Application US/08524051
; Patent No. 586788
; GENERAL INFORMATION:
APPLICANT: Kramer, Karl J.
APPLICANT: Choi, Hee Kyung
APPLICANT: Choi, Hee Kyung
APPLICANT: Corpus, Lolian, Bhuvana
TITLE OF INVENTION: RECOMBINANT CHITINASE AND USE THEREOF AS
TITLE OF INVENTION: A BIOCIDE
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSES: Hovey, Williams, Timmons & Collins
STREET: 2405 Grand Blvd., Suite 400
CITY: Kansas City
STATE: MO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        91;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7 ILSIMACIGLANASIKRDHNDYSKNPMRIVCYVGTWSVYHK-VDPYTIEDIDPFKCTHLM 65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, Application US/09545814
Patent No. 6416977
GENERAL INFORMATION:
TITLE OF INVENTION: FLEA CHITINASE NUCLEIC ACID MOLECULES, PROTEINS AND TITLE OF INVENTION: USES THEREOF
PILE REFERENCE: FC-5-C1
CURRENT APPLICATION NUMBER: US/09/545,814
CURRENT APPLICATION NUMBER: 06/128,833
PRIOR PILING DATE: 1999-04-09
                                                                  450 TITIAKPPOSVIDEENDINVRPEPKPEPOPEPEVEVP-PTENE-------VDGSEI

A.Title Chitlinases are a multi-gene family in Aedes, Anopheles, and Drosophila A.Title Chitlinases are a multi-gene family in Aedes, Anopheles, and Drosophila A. Reference number: 217872

A.Accession: T14075

A.Molecule type: DNA

A.Residues: 1-1635 «DEL»

A.Cross-references: EMBL.AF026492; NID:g2564720; PID:g2564721; PIDN:AAB81850.1

C.Genetics:

A.Gene: CHT.

A.Introns: 462/3; 524/3; 618/1; 951/3; 1151/2

C.Keywords: glycosidase; hydrolase; polysaccharide degradation

Iso'd=Q13231-3; Sequence=VSP 008633;
Note=Duplication of 24 bp in exon 10 leads to the use of a
cryptic splice site. The normal splice site is still present but
                                                                                                         Fusetti F., von Moeller H., Houston D., Rozeboom H.J., Dijkstra B.W., Boot R.G., Aerts J.M.F.G., van Aalten D.M.F.; Boot R.G., Aerts J.M.F.G., van Aalten D.M.F.; Elstrature of human chitotriosidase. Implications for specific inhibitor design and function of mammalian chitinase-like lectins."; J. Blod. Chem. 277:25537-25544 (2002).
-!- FUNCTION: Degrades chitin and chitotriose. May participate in the defense against nematodes and other pathogens. Isoform 3 has no enzymatic activity.
-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  цÉ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          macrophages.

POLYMORPHISM: A 24 bp duplication in exon 10 leads to the activation of an alternative splice site and the production of an inactive protein. About 6% of the population are deficient for CHITI activity, while 35% are carriers and show reduced enzyme levels. People with CHITI deficiency appear perfectly healthy. MISCELLANBOUS: Patients with type I Gaucher disease (GD I) [MIM:20800] have very high plasma levels of CHITI, and this can be used as diagnostic aid and to evaluate the success of treatment. Successful therapy brings the CHITI activity levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SUBCELLULAR LOCATION: Secreted. "Chitinases are a multi-gene family in Aedes, Anopheles and
Drosophila..."
-1. CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-
acetyl-Deglucosamine polymers of chitin.
-1. SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl
hydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=22426071; PubMed=12537574;

CHITIN-BINDING TYPE-2 2.
                                                                          Insect Mol. Biol. 7:233-239(1998).

-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-acety-1-glucosamine polymers of chitin.

-!- SIMILARITY: Belongs to chitinase class II (family 18 of glycon hydrolases).

-!- SIMILARITY: Contains 2 chitin-binding type-2 domains.

Marshall J.T.A., Nancarcow C.D., Brownlee A.G.;

"Cloning and sequencing of a CDNA encoding an ovine
costrus—associated oviducal protein.";

"Exprod. Fertil. Dev. 8:305-310(1996).

"I FUNCTION: Binds to cocyte zona pellucida in vivo. May play a role
in the fertilization process and/or early embryonic development.

"I SUBCELLULAR LOCATION: Secretory granules.

"I TISSUE SPECIFICITY: Oviduc.

"I TISSUE SPECIFICITY: Oviduc.

"I DEVELOPMENTAL STAGE: Levels are highest in the fimbria and ampulla
t estrus and nday 1 of pregnancy, when gamete transport and
fertilization occurs in the E2-dominated fallopian tube. Levels
decline significantly on day 2 and undergo a further significant
reduction on day 3 of pregnancy coincident with transport of the
embryo from the oviduct to the uterus, a reproductive stage
associated with rising progesterone levels.

"I SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.                                                               zona pellucida-binding glycoprotein.";
Biochem. J. 295:437-445(1993).
-!- FUNCTION: Binds to occyte zona pellucida in vivo. May play a role in the fertilization process and/or early embryonic development.
Might act as a protective secretion influencing the first steps of the reproductive process necessary for the normal triggering of 'fertilization and early embryonic development.
-!- SUBCELLULAR LOCATION: Secretory granules.
-!- TISSUE SPECIFICITY: Oviduct.
-!- PTM: HIGHLY O-GLYCOSYLATED AND ALSO N-GLYCOSYLATED.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolasses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=94058981; PubMed=8240241;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      89 "Human synovial cells secrete a 39 kDa protein similar to a bovine
"Human synovial cells secrete a 39 kDa protein similar to a bovine
mammary protein expressed during the non-lactating period.";
Biochem. J. 269:265-268(1990).
-!- FUNCTION: May play an important role in the capacity of cells to
respond to and cope with changes in their environment.
-!- SUBCELDUAR LOCATION: Extracellular.
-!- TISSUB SPECIFICITY: Present in articular chondrocytes, synovial
cells as well as in liver. Undetectable in muscle tissues, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rehli M., Krause S.W., Andressen R.; "Molecular characterization of the gene for human cartilage gp-39 (CH131), a member of the chitinase protein family and marker for late stages of macrophage differentiation.";
